Which Sector Of The IT Industry Has The Highest Profit Among The Years (2013 – 2016) ?

Average of Gross Profit Among the years (2013-2016)

The Average Gross Profit of The Sector of Computer Hardware Comparing to The Sector of System Software Among the years 2013 - 2016
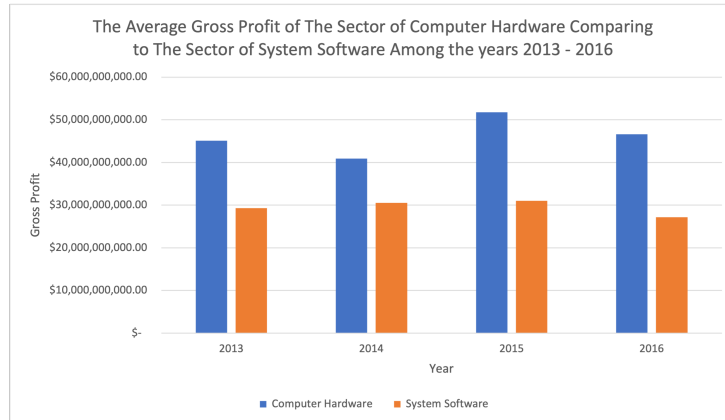

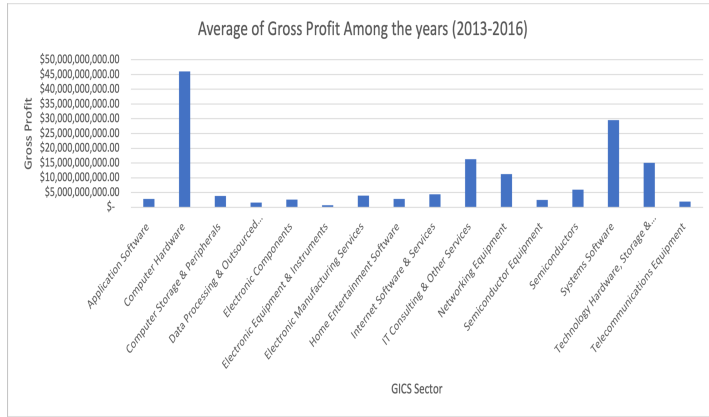

Here are the histograms for the average gross profit of companies of different fields of the IT industry in the years 2013 to 2016.

As it is shown, the two highest profits were in the hardware companies with slightly above 45 billion, and the system software companies with almost 30 billion.

We can also see that the hardware field had always had a higher profit comparing to the software. The highest profit for hardware companies was in the year 2015, where it was above 50 billion. It also has a more spread out range of about 11 billion among the four years, as well as a higher standard deviation with a ($4,502,385,226.65), while on the other hand, the system software field has a range of almost 4 billion and a lower standard deviation with ($1,732,1605.18), which indicates less variability.
